

The petition of RM-10782 would unacceptably lower standards of the Amateur Service. Like them I have three family members whom are Technicians and I would like to talk to them on HF phone. But the Amateur Service is organized to provide Public Emergency communications and a trained resource for our nation. What good would Technician Class operators be on HF without Morse Code if that was all that could be used?

The Amateur Service has already been structured to accomodate all users of all types. The family members may use VHF/UHF for providing much needed close in support for emergency operations. Do not accept RM-10782.
